

XMAP

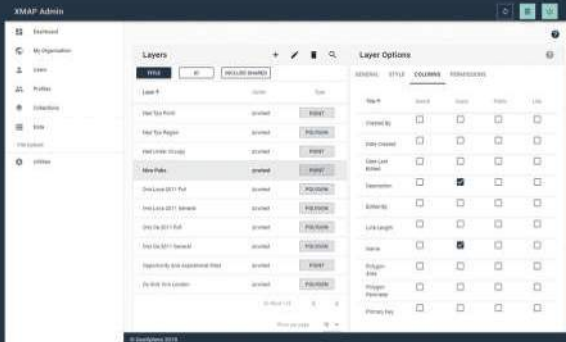

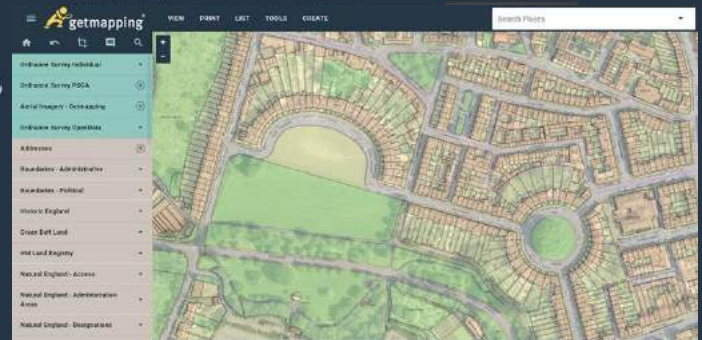

Web-based GIS software that enables effective Remote Working

Why use XMAP?

DATA. With XMAP you can upload and maintain your geospatial data and share it with colleagues, external teams and customers.

SIMPLICITY. XMAP isn't as complex as QGIS or ESRI software, but that's the beauty of it! It has a structured layout with key GIS tools.

CONTROL. The Admin Dashboard gives you complete control over usage, editing, styling and branding. This makes it suitable as a full-blown corporate GIS.

PRICE. We tailor your subscription to fit your business model, usage and, importantly, budget.

RESPONSIVE DESIGN

The touch-enabled interface works on different screen sizes so users can access data and tools wherever they are

ENCRYPTED & SECURE

All communications are encrypted and the system holds up to rigorous penetration testing. This allows high security data to be hosted confidently

UNLIMITED USAGE

No restrictions on usage within an organisation, and unlimited user accounts option available (ideal for Local Authorities, for example)

SINGLE SIGN-ON

XMAP can be deployed with in-built User Management or through utilising a Single Sign On (SSO) policy or manager, giving flexibility on or off-site

RAPID DEPLOYMENT

Easily switch from other well-known services; get started in a matter of hours
